

INDUCTION CAP SEALER (CONVEYORIZED)

Induction sealing is simple and reliable method of bottle sealing. It welds an aluminium foil seal to bottle neck: Induction sealing, otherwise known as cap sealing, is a non-contact method of heating a metallic disk to hermetically seal the top of plastic and glass containers. This sealing process takes place after the container has been filled and capped.

ADVANTAGES:

- Tamper evidence
- Leak prevention
- Freshness Retention
- Improved product shelf life
- Pilferage protection
- Sustainability
- Production Speed
- Improve pack presentation and customer acceptance

Features:

- Air Cooled with wide UF Coil
- No foil detected with Rejection
- Stalled Bottle Detected
- Over Heat Protection

Technical Specifications:

- Input Power : 1.2KW
- Can seal foil caps up to 40 to 60 Bottles/Minute
- Cap Size : 25mm to 65mm

PRICES:

Complete machine as above: Rs. ₹ 2,60,000.00 (Ex-works, Mumbai),
(+add packing charges: ₹ 7,000/-)

Delivery: Within 4 weeks.

Taxes / Duties: Extra as legally applicable at the time of delivery. (Presently 12.36% Excise Duty and 2% C.S.T. against 'C' form or 12.5% V.A.T if no 'C' form).

Freight: Extra as applicable, payable by customer to transporter.

Payment: 40% value of order in advance and balance on readiness before dispatch.

In case you require any other details or confirmations, feel free to contact us.
